

How many fields of input we need

Logic what happens with input data

Example:

We have 6 fields and we need calculate how many times we will pour gasoline.

Start location – Germany

End Location – Belgium

Distance between- 1000 km

Contribution liters 100km

Gasoline tank – 50 liters.

Price per liter – 1.6 EUR

We need calculate:

How many times we will take full Gasoline Tank

EUR Contribution
